

To the elected officials.

The funding is **extremely critical** for the remaining future Agriscience students. If we do not have the proper education students will **leave** Connecticut and go elsewhere to pursue the Agricultural dreams.

We still have small farms to offer in Connecticut and they continue to exist in Connecticut. Still others that have a dream of having a small piece of property that they can produce, herbs, vegetables, livestock, honey, maple syrup, veterinarian services.

Please keep the funding available for Agriscience students or we will lose that population and part of the history of Connecticut
